

Breaking Down the Wall Between Remote Locations

Embrace Serendipity

Serendipitous interactions between individuals often result in the generation of new ideas. However, when people are remotely located, such interactions are unlikely. This product removes the barrier inhibiting these forms of interactions, allowing idea generation to occur across physical locations and jumpstarting global collaboration.

Inviting Aesthetics

Realistic Fish Animations have been developed, making the product eye-catching and appealing and a place where people will want to be.

Facial Recognition software has been implemented, allowing the fish to react to a person's presence when they approach the Wall.

Gesture Recognition software is included in the system, providing users with a way to interact with the fish.

Remote Collaboration Made Easy

Video Chat Capabilities have been integrated into the system, with a wide-angled HD camera, microphones and speakers ensuring high quality.

Word Bubbles appear with information pertinent to current projects, allowing users to see what is happening in the company.

Employee Profiles can be displayed by clicking on a fish, providing users with rich information on experts in a variety of fields.

Eye Catching

A **HD Projector** ensures a high quality projected image appealing to people passing the area, with a clear resolution stream of the remote side.

The **6' x 8' Size** guarantees that foot traffic passing the area of the screen will notice it, providing extra opportunities for serendipitous interactions.

Positioned in a Hallway, the location of the product will maximise its effectiveness in increasing remote serendipitous encounters.
